The Centers for Disease Control and Prevention states blood lead levels less than 10 ug/dL in children have been associated with numerous adverse health effects. New York State Guidelines: Blood lead levels in the range 5-9 ug/dL have been associated with adverse health effects in children aged 6 years and younger.

If the collected specimen type was capillary, the Centers for Disease Control and Prevention provide the following recommendation: Repeat pediatric blood levels equal to or greater than 10 ug/dL on a fresh venous blood specimen.

Detection Limit = 1  
(Children under 16 years)

**Hemoglobin**

Hemoglobin 12.9 g/dL 10.9 - 14.8 01
